Explanations and source references

Question 1: choice A

Choice A

Level: straight rigid body; one or more bubble vials.

Choice B

Tape measure: marked flexible tape; retracting case.

Choice C

Combination/open-end/box wrench: fixed-size opening; open end, box end, or both.

Choice D

Carpenter square / combination square: right-angle reference surfaces; rigid blade and stock or L-shaped body.

Supported claims

- Level is recognized by straight rigid body and one or more bubble vials. (Evidence: Accepted project release record) **Caveat:** Recognition cues describe the accepted original illustration and do not imply a universal product silhouette.
- Carpenter square / combination square is recognized by right-angle reference surfaces and rigid blade and stock or L-shaped body. (Evidence: Accepted project release record) **Caveat:** Recognition cues describe the accepted original illustration and do not imply a universal product silhouette.
- Tape measure is recognized by marked flexible tape and retracting case. (Evidence: Accepted project release record) **Caveat:** Recognition cues describe the accepted original illustration and do not imply a universal product silhouette.
- Combination/open-end/box wrench is recognized by fixed-size opening and open end, box end, or both. (Evidence: Accepted project release record) **Caveat:** Recognition cues describe the accepted original illustration and do not imply a universal product silhouette.

Question 2: choice B

Choice A

Needle-nose pliers have long tapered gripping jaws for small objects and confined spaces.

Choice B

Correct. Diagonal cutting pliers have opposed cutting edges for material within their rating.

Supported claims

- Long gripping jaws versus opposed cutting edges. (Evidence: Accepted project release record)

Where this comes from

- **NY Custodian Exam release process** — Accepted comparison visual release ledger (verified 2026-08-25)

Evidence: Accepted project release record

Long gripping jaws versus opposed cutting edges.
